

Shorten Links

Shorten links to more easily share them on Twitter, Facebook and other social media, in blog posts and email. Here you can also save and track the activity of each shortened link.

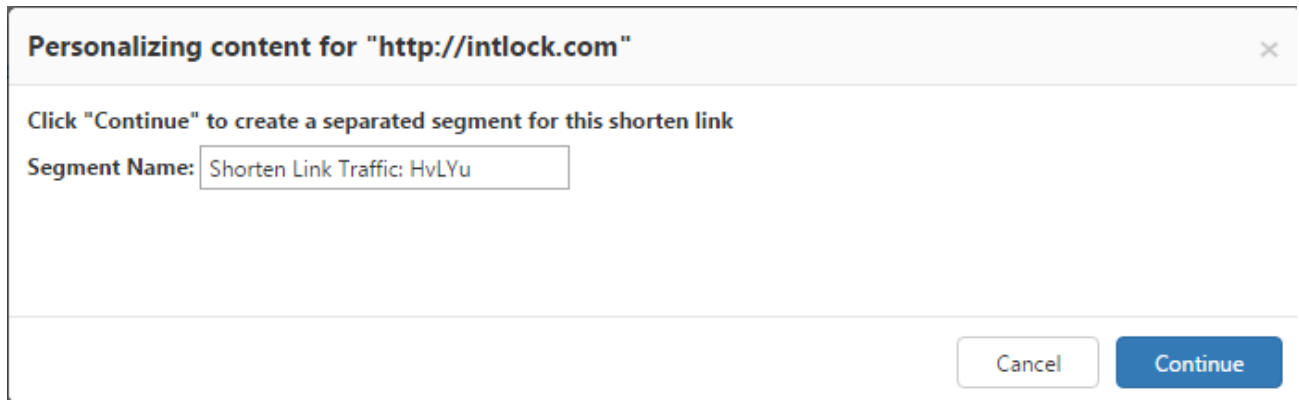

- Shorten URLs with a single click
- View the number of clicks on each link

How to Create a Short Link

1. Type or paste the URL you wish to shorten in the text box and click **Shorten**. The URL will automatically be added to the list below.
2. Click **Copy to clipboard** to copy the shortened link to your clipboard.

3. You can add personalized content for this link by clicking **Personalize Content**. A popup dialog will appear, click **Continue** to create a separated segment for that link.

Personalize Content Dialog

4. The next page that will appear is the **Add Personalized Content** (See *how to Create Personalized Content* in [Behavioral Targeting](#)). The personalized content you have added can be further configured in Behavioral Targeting.

Note that using this module requires pre-configuration (See [Configuring Short Links](#)).
