Get real-time data about your website usage that you can analyze and act upon. You can access the Analysis Center with a website tree called the Object Explorer, which maps out the entire content and structure of your website. You can click on any part of the website tree to view a real-time analysis of that part of your website. The Analysis Center's search box helps you to find any specific sub-site, page or document you want to analyze. You can also create and save new analysis reports based on either the widgets of your choice or using existing analysis templates. In the Analysis Center, a user assigned with an Analyst role can view real time data for any monitored page. The query results in Analysis Center are not for distribution purposes and are not saved in a historical format.

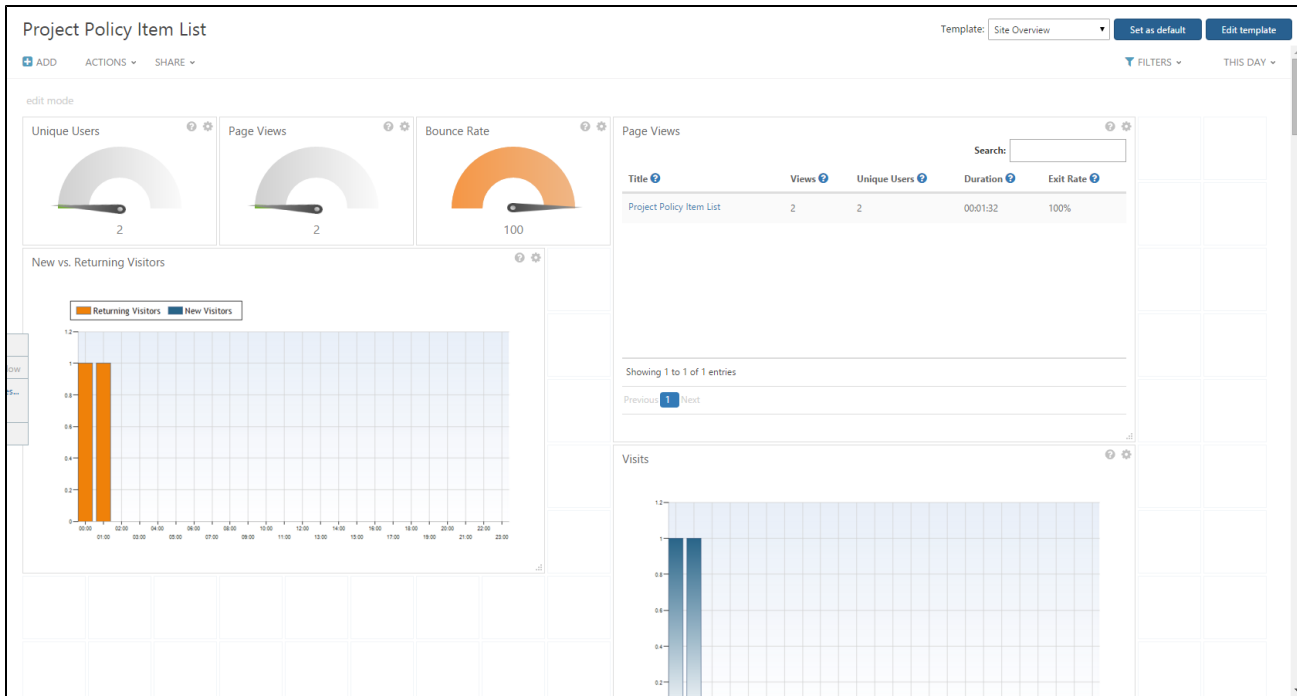

## How to Display Real-time Data

The Navigation between the monitored pages is done in the Navigation panel with Object Explorer or with the user's Favorite items.

1. In the Navigation pane, under Analysis Center, click an item in Object Explorer or in Favorites and select **Open** from the File Menu.
2. The selected file will now be displayed in the Central Area

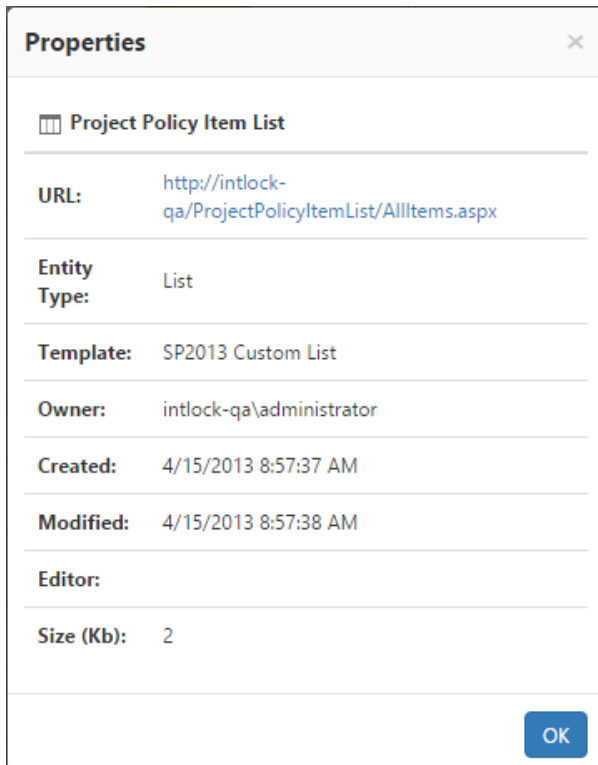

Object Explorer File Menu

Real time data for a selected item in Object Explorer

## How to View Item Properties in Object Explorer

1. In the Navigation pane, under Analysis Center, click an item in Object Explorer and then select **Properties**.
2. The Properties window will be displayed over the Central Area.
3. Click either **OK** or the X in the top right corner to return to the Main Window.

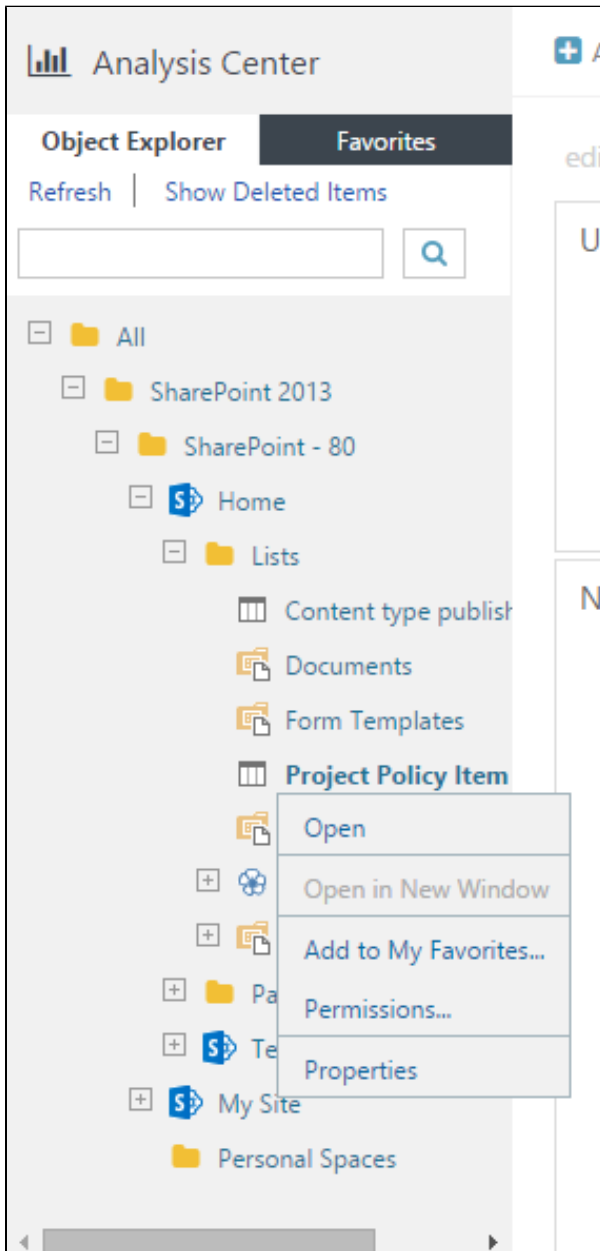

Item Properties Window

## How to Add an Item to Favorites in Object Explorer

You can customize an item in Object Explorer by adding it to your Favorites for quicker access in the Navigation pane.

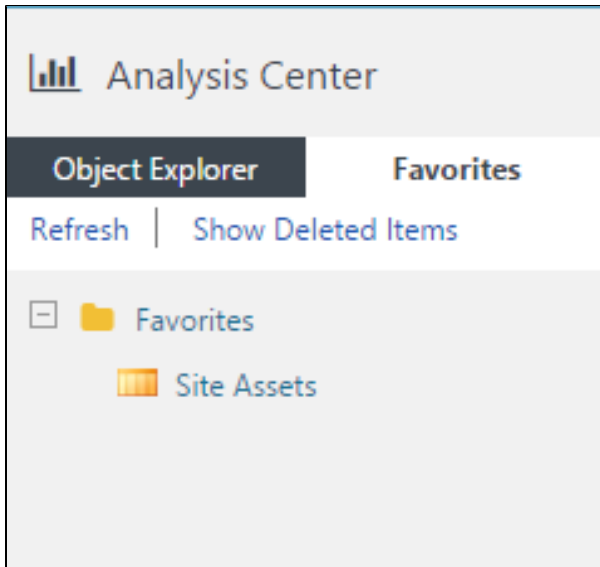

1. In the Navigation pane, under Analysis Center, click an item in Object Explorer and select **Add to My Favorites...**
2. The item can now be found in the Favorites section in the Navigation pane as described below.

*Analysis Center Object Explorer File Menu*

## How to Switch Between Object Explorer and Favorites

1. In the Navigation pane, under Analysis Center, click either Object Explorer or Favorites to switch between them.
2. Object Explorer displays all monitored pages including items that have been added to your Favorites.

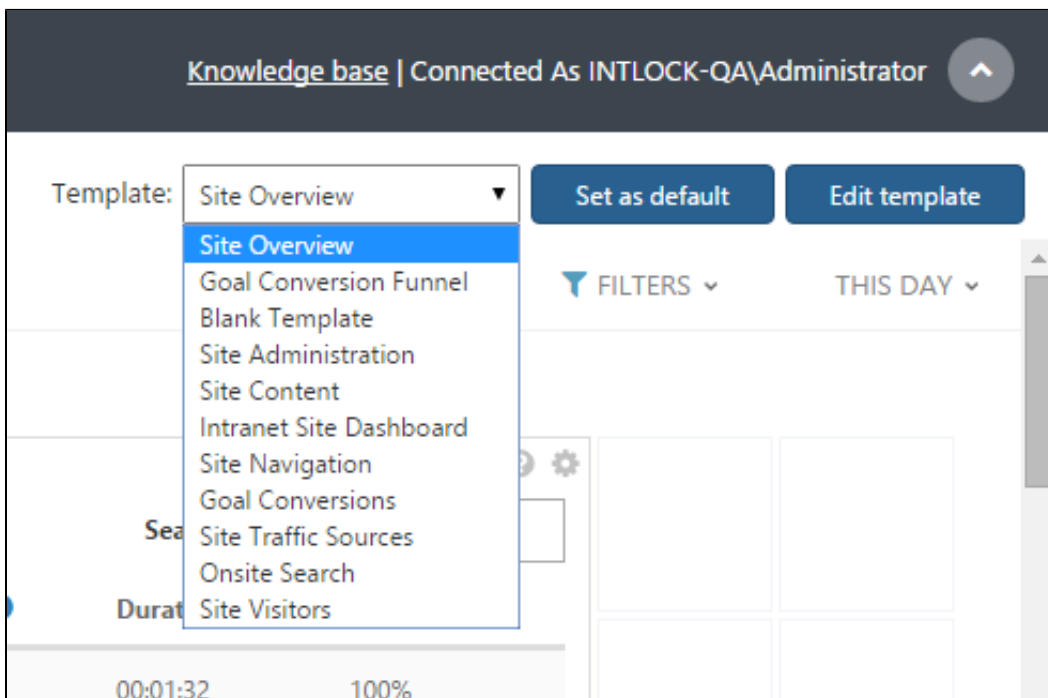

Navigation Pane displaying Favorites

## How to Select a Template for an Item in Object Explorer

Each item type in Object Explorer has several pre-defined templates which were created by an Administrator.

1. Select from a list of available templates by clicking the Template Menu located on the top right of the Central Area. This option is only available to a user assigned with an Analyst role.
2. If you would like to edit this template, choose **Edit Template**.

Analysis Center Template Menu

For more information see ["How to Create a New Template"](#)

## How to Set a Default Template for an Item

Authorized users can select a default template for a single item in Object Explorer:

1. In the Navigation pane, under Analysis Center, click an item in Object Explorer and select **Open**.
2. On the top of the Central Area, select a template from the list of templates.
3. Click **Set as default**.

*Analysis Center Template options*

## How to Search Object Explorer

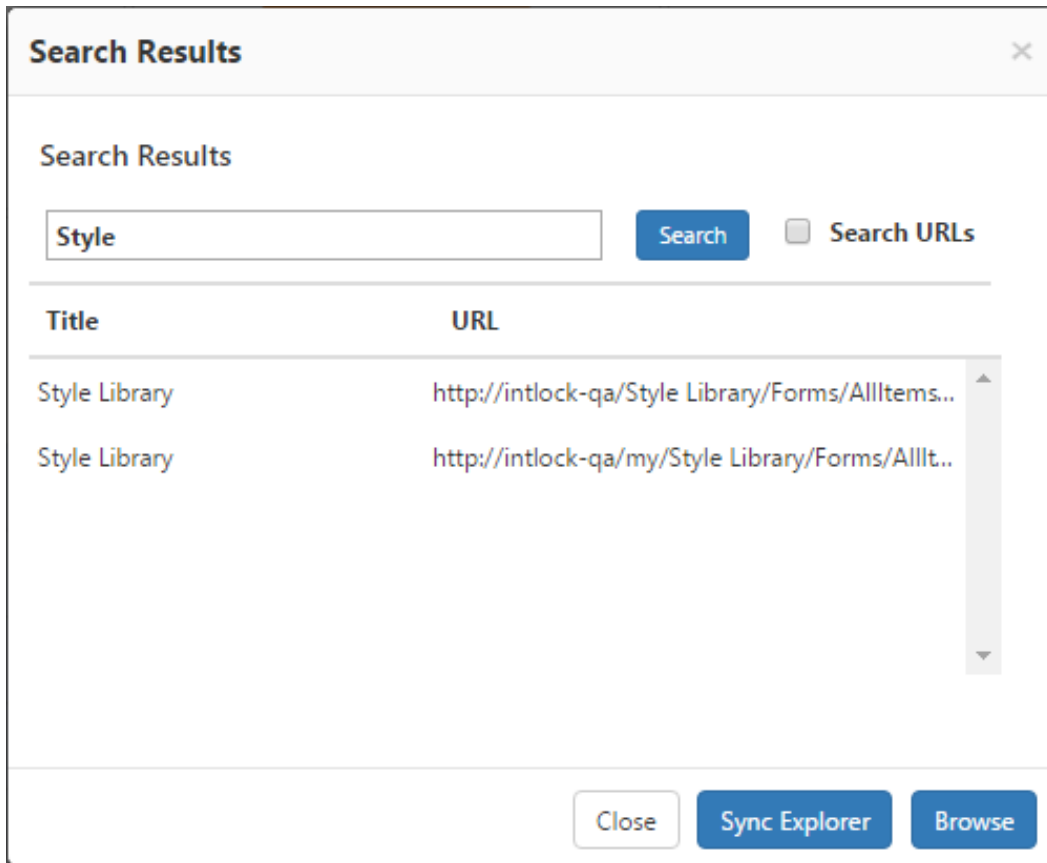

You can search Object Explorer using the search box in the Navigation pane:

1. In the search box at the top of the Navigation pane, enter a search term and click the magnifying glass.

*Object Explorer Search Box*

2. In the Search Results dialog, select the desired item and click **Sync Explorer**.
3. Object Explorer displays and highlights the selected item.
4. To view an item as a web page, click **Browse** in the Search Results dialog.
5. To search inside URL text, select **Search URLs** from the Search Results Window, and click Search again

*Search Results Window*

## How to Set View Permissions for Items in Object Explorer

The system administrator can set view permissions for items in Object Explorer for any user or group in the Active Directory. The permissions are inclusive and are applied for an item and all of its child items in Object Explorer.

1. In the Navigation pane, under Analysis Center, click an item in Object Explorer and select **Permissions...** from the File Menu.
2. In the Permissions dialog, click **Add**, then enter the user/group name and select the View check box.  
User permissions precede group permissions. To grant permissions for all users, select the default group "All".

*Permissions Dialogue Window*

3. To remove Permissions from a user or group, either deselect the View check box, or select all users and groups you would like to remove via the check box to the left of the Display Name column and click **Remove**.
4. To save the permissions, click **Save**.

## How to Display Deleted Items in Object Explorer

Deleted items are items which have been deleted from the monitored environment but are saved in Object Explorer. Reports and real time queries are available as deleted items.

1. In the Navigation pane, under Analysis Center in either Object Explorer view or Favorites view, click **Show Deleted Items**.
2. The removed items are displayed in Object Explorer in red.
3. Click **Hide Deleted Items** to return to the standard view.
