

External Destinations

This report shows the total number of clicks on links that lead away from your site, also known as outbound links.

CardioLog Analytics automatically identifies links to external websites and resources, and measures the total number of clicks on each one of these links. A link is defined as external if its domain (and port number) differ from the domain (and port number) of the visited page. For example, when visiting the page `<http://emea.corp.com/>`, the following links are considered external links: `<http://emea.corp.com:8082/>`, `<http://us.corp.com/>`

The screenshot shows a web interface titled "External Destinations" with a search bar and a table of data. The table has two columns: "URL" and "Clicks". The data is as follows:

URL	Clicks
http://www.intlock.com/	107
http://www.youtube.com/watch?v=wdbWnO899AA	97
http://www.intlock.com/intlocksite/ProductsAndServices/Cardiolog.asp	46
http://www.intlock.com/intlocksite/Downloads/cardiolog/cardiolog-ent-reques ...	24
http://www.intlock.com/intlocksite/ProductsAndServices/CardioLog/CardioLog- ...	15
http://www.intlock.com/intlocksite/About/IntlockProfile.asp	12
http://www.intlock.com/intlocksite/ProductsAndServices/CardioLog/CardioLog- ...	10
http://www.intlock.com/intlocksite/ProductsAndServices/CardioLog/CardioLog. ...	9

At the bottom of the table, there are navigation controls: "Previous 1 Next" and "Showing 1 to 9 of 9 entries".

External Destinations Table Widget

Available Report Widgets

Table

Table Widget

You can display the data in different modes by editing the settings in the Advanced section of the widget preferences.

- In order to display the clicked links within the selected Website Item home page select *All Pages > No*.
- In order to display the clicked links within all child items of a selected Website Item select *All Pages > Yes*.

The External Destinations table widget contains the following columns:

- **URL** - The URL of the outbound link.
- **Clicks** - The number of times the outbound link has been clicked.

You can also [drill down](#) on any listed link in the External Destinations table widget and select **Clicked By** to learn more about all users who have clicked on the listed link.
