CardioLog Analytics On-Premises

CardioLog Analytics On-Premise is the only analytics solution designed for all versions of SharePoint On-Premise (2019, 2016, 2013, and 2010), SharePoint Online and Yammer. It enables you to improve the usability of your intranet, engage your users, drive portal collaboration, boost your ROI, and enhance the overall productivity of your business.

CardioLog Analytics SaaS helps:

- **Improve Adoption** - Identify your end user needs with powerful metrics to achieve your return on investment, and help your users gain value from the portal.
- **Boost Engagement** - Understand and take action to assist your users in how they interact with the portal, with powerful metrics that dive deep to drill down into your users portal engagement levels.
- **Increase Collaboration** - Take your SharePoint portal to a different dimension. Support corporate communication and get your users talking. Gain a holistic understanding of how your users are liking, sharing, rating, following and more.
- **Ease Migration** - Capture critical data that can give you insights into your SharePoint portal, to help you track and analyze each step of the process, including before, during, and after the migration. Discover valuable opportunities to make critical changes to improve your adoption levels after deployment.
- **Optimize Portal Resources** - Enrich your portal by monitoring its growth through all stages of development. Gain a holistic perspective of your portal content to take action and free up critical portal space and save resources.
- **Enhance Portal Usability** - Help your users navigate through the portal, and find exactly what they're looking for. Measure whether vital portal items are receiving traffic, where your users are getting stuck, what they're searching for, and where they're entering and exiting the portal.
